# Team 4: Suicide Rates in the US 1985-2015

Yeri Jeong, Dhiraj Lahoti, Sravya Lenka, Iskander Lou

### Research Question

How do demographic (e.g. sex, age, generation) and socioeconomic factors (e.g. year, GDP) correlate with suicide rates in the United States?

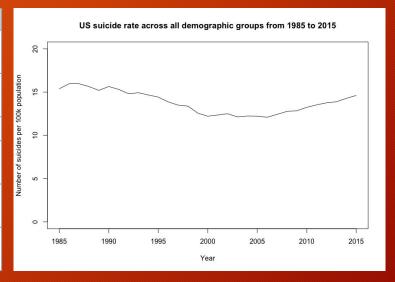

#### Data Source

- <u>Data</u> source: Kaggle dataset derived from WHO, World Bank, UN Development Program
- Overview

| year | sex age            | suicides_no | population | suicides.100k.pop | country.year      | HDI.for.year | gdp_for_year      | gdp_per_capita | generation   |
|------|--------------------|-------------|------------|-------------------|-------------------|--------------|-------------------|----------------|--------------|
| 1985 | male 05-14 years   | 205         | 17370000   | 1.18              | United States1985 | 0.841        | 4,346,734,000,000 | 19693          | Generation X |
| 1985 | female 05-14 years | 73          | 16553000   | 0.44              | United States1985 | 0.841        | 4,346,734,000,000 | 19693          | Generation X |
| 1986 | male 05-14 years   | 199         | 17338000   | 1.15              | United States1986 | NA           | 4,590,155,000,000 | 20588          | Generation X |
| 1986 | female 05-14 years | 56          | 16517000   | 0.34              | United States1986 | NA           | 4,590,155,000,000 | 20588          | Generation X |
| 1987 | male 05-14 years   | 199         | 17486000   | 1.14              | United States1987 | NA           | 4,870,217,000,000 | 21631          | Generation X |
| 1987 | female 05-14 years | 52          | 16660000   | 0.31              | United States1987 | NA           | 4,870,217,000,000 | 21631          | Generation X |

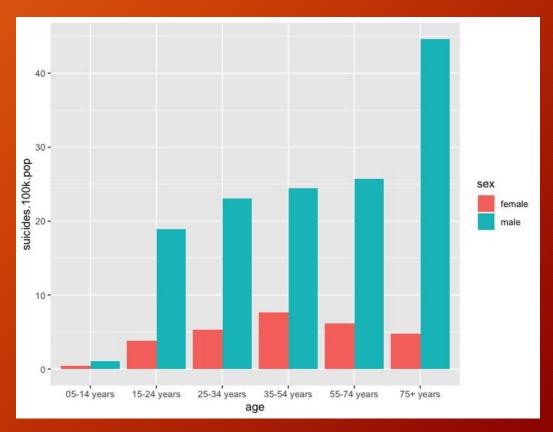

## Data Analysis

| US |               | n                   | Mean   | Sd        | Min    | Max    |
|----|---------------|---------------------|--------|-----------|--------|--------|
|    | Sex           | 186 per<br>level(2) |        |           |        |        |
|    | Age           | 62 per<br>level(6)  |        |           |        |        |
| IV | Generation    | 372                 |        |           |        |        |
|    | Year          | 12 per<br>level(31) |        |           | 1985   | 2015   |
|    | GDP           | 372                 | 39,270 | 12,334.12 | 19,693 | 60,387 |
| DV | Suicide rates | 372                 | 13.82  | 13.23     | 0.26   | 58.95  |

## Findings

- In the factors that we considered for the research question, Sex and Age have a significant relationship with suicide rates. However, Year, Generation, and GDP do not.
- Suicide rates in males were higher than females, and age showed a positive correlation.

## Findings

|             | Coefficient | T value        | P value |
|-------------|-------------|----------------|---------|
| Sex\$Male   | 18.29       | t(365) =27.58  | p < .01 |
| Age (15-24) | 10.61       | t(365) = 9.24  | p < .01 |
| Age (25-34) | 13.44       | t(365) = 11.70 | p < .01 |
| Age (35-54) | 15.31       | t(365) = 13.33 | p < .01 |
| Age (55-74) | 15.21       | t(365) = 13.24 | p < .01 |
| Age (75+)   | 23.95       | t(365) = 20.85 | p < .01 |

#### Conclusion

- •The findings that certain genders (i.e. male) and older age groups are more likely to die by suicide could imply that these populations require more preventative social welfare support.
- •There should be more studies done in this topic that investigate the reasons for the increased risk in suicide for men and especially older men (75+).
- •It's interesting to note that the differences of suicide rates between generations are not significant, despite the growing awareness of mental health issues in the US over time.
- Our findings are limited to the United States and therefore can't be generalized to the entire world.
